WARNING:tensorflow:From
/content/models/research/object_detection/utils/visualization_utils.py:617: py_func (from
tensorflow.python.ops.script_ops) is deprecated and will be removed in a future version.
Instructions for updating:
tf.py_func is deprecated in TF V2. Instead, there are two
    options available in V2.
    - tf.py_function takes a python function which manipulates tf eager
    tensors instead of numpy arrays. It's easy to convert a tf eager tensor to
    an ndarray (just call tensor.numpy()) but having access to eager tensors
    means `tf.py_function`s can use accelerators such as GPUs as well as
    being differentiable using a gradient tape.
    - tf.numpy_function maintains the semantics of the deprecated tf.py_func
    (it is not differentiable, and manipulates numpy arrays). It drops the
    stateful argument making all functions stateful.

W1202 00:55:02.455761 140530290333568 deprecation.py:323] From

Total Loss after 25k steps is 0.69 which quite good compare to SSD_mobilenet_v2.

It is quite accurate prediction object with high confidance with less step compare to ssd_mobilenet.

It is quite slower(As it has higher weights to train) compare to ssd and yolo.
